AMENDMENTS TO THE CLAIMS

1. (Currently amended) A method for producing a synchronized population of

conifer somatic embryos, the method comprising:

(a) cultivating pre-cotyledonary conifer embryogenic cells in, or on a maintenance

medium comprising nutrients that sustain the embryos and one or more agents for adjusting the

osmolality of the medium to a desired range;

[[(a)]] (b) cultivating pre-cotyledonary conifer embryogenic cells from step (a) for

a period of-at-least from 0.5 week weeks to 5 weeks in, or on, a synchronization medium that

comprises an absorbent composition and at least one synchronization agent selected from the

group consisting of abscisic acid and a gibberellin, wherein the absorbent composition and the at

least one synchronization agent are present at a concentration effective to produce a

synchronized population of pre-cotyledonary conifer somatic embryos wherein at least 50% of

the embryos in the synchronized population are at the same developmental stage; and

[[(b)]] (c) transferring the synchronized population of pre-cotyledonary conifer

somatic embryos from step (b) to a development medium and incubating the embryos for a

period from 9 to 14 weeks to produce a synchronized population of cotyledonary conifer somatic

embryo development embryos.

2. (Original) The method of Claim 1 wherein the absorbent composition is selected

from the group consisting of activated charcoal, soluble poly(vinyl pyrrolidone), insoluble

poly(vinyl pyrrolidone), activated alumina, and silica gel.

3. (Original) The method of Claim 2 wherein the absorbent composition is activated

charcoal.

Seattle, Washington 98101 206.682.8100

4. (Original) The method of Claim 1 wherein the concentration of the absorbent

composition in the synchronization medium is from about 0.5 g/L to about 50 g/L.

5. (Original) The method of Claim 1 wherein the absorbent composition is activated

charcoal, and the activated charcoal is present in the synchronization medium at a concentration

in the range of from about 0.1 g/L to about 5 g/L.

6. (Original) The method of Claim 1 wherein the absorbent composition is activated

charcoal, and the activated charcoal is present in the synchronization medium at a concentration

in the range of from about 0.5 g/L to about 1 g/L.

7. (Original) The method of Claim 1, wherein abscisic acid is used as a

synchronization agent.

8. (Original) The method of Claim 1, wherein a gibberellin is used as a

synchronization agent.

9. (Original) The method of Claim 1, wherein abscisic acid and at least one

gibberellin are used as synchronization agents.

10. (Original) The method of Claim 1, wherein a gibberellin is present in the

synchronization medium at a concentration of from about 0.5 mg/L to about 500 mg/L.

11. (Original) The method of Claim 1, wherein a gibberellin is present in the

synchronization medium at a concentration of from about 1.0 mg/L to about 100 mg/L.

12. (Original) The method of Claim 1, wherein abscisic acid is present in the

-3-

synchronization medium at a concentration of from about 1.0 mg/L to about 500 mg/L.

LAW OFFICES OF CHRISTENSEN O'CONNOR JOHNSON KINDNESSPILE

206.682.8100

13. (Original) The method of Claim 1, wherein abscisic acid is present in the

synchronization medium at a concentration of from about 0.5 mg/L to about 20 mg/L.

14. (Canceled)

15. (Original) The method of Claim 1, wherein the conifer embryogenic cells are

cultured in, or on, the synchronization medium for a period of from about 1 week to about

3 weeks.

16. (Original) The method of Claim 1, wherein the conifer embryogenic cells are

cultured in, or on, the synchronization medium for a period of from about 1 week to about

2 weeks.

17. (Original) The method of Claim 1, wherein the osmolality of the synchronization

medium is from about 90 mM/Kg to about 300 mM/Kg.

18. (Original) The method of Claim 1, wherein the pH of the synchronization

medium is from about 5 to about 6.

19. (Original) The method of Claim 1, wherein Loblolly pine somatic embryos are

produced from Loblolly pine embryogenic cells.

20. (Canceled)

21. (Original) The method of Claim 1, wherein at least 75% of the embryos in the

-4-

synchronized population of conifer somatic embryos are at the same developmental stage.

22. (Canceled)

- 23. (New) The method of Claim 1, wherein the osmolality of the development media of step (c) is higher than the osmolality of the synchronization media of step (b).
- 24. (New) The method of Claim 1, wherein the osmolality of the maintenance media of step (a) is from about 180 mM/Kg to about 400 mM/Kg; the osmolality of the synchronization media of step (b) is from about 90 mM/Kg to about 300 mM/Kg; and the osmolality of the development media of step (c) is from about 250mM/Kg to about 450 mM/Kg.
